

Galaxy Safety Solutions is very pleased to offer you the opportunity to have our hand protection specialist to visit your site and review your current hand protection system to make sure you are protecting your employees' hands and arms safe.

Our surveys are carried out by **Billy Auld, with over 30 years' experience in the hand protection industry** and having worked directly for top manufacturers, alongside suppliers and distributors. He is now engaging with end users to help identify areas within organisations where improvements can be made to the safety of those on site, compliance with current EN standards and legislations as well as support a total acquisition cost approach which can significantly reduce your annual expenditure, improve your employee care and support your safety improvement goal.

This survey is offered **completely free of charge** to the members of NEAA based on our terms and conditions*. It would entail Billy spending at least a day on site observing your workforce and the risks they face. In the days following the site visit you will receive a copy of your **Glove Site Survey Report** detailing areas on your site which hand protection products we suggest to alleviate the risk of injury. As part of this deal we offer glove trials with every completed site survey. We offer continued support including **toolbox talks and customised posters**, to help make glove selection simpler for your team.

*For a free glove survey terms and conditions apply. The minimum criteria must be met. Minimum of 50 glove users on site and an interest in protection for: Cut Resistance. Surveys available in Mainland UK and Ireland only.
